NCH | Androscoggin Valley
Hospital
north country healthcare

Ophthalmology focuses on the diagnosis and treatment of eye diseases and disorders such as retinal detachment. Non-surgical treatments are also available via retinal injections for macular degeneration.

Common Ophthalmology conditions can include, but are not limited to:

Age-Related Eye Problems

Cataracts

Diabetic Retinopathy

Glaucoma

**Posterior Vitreous Detachment
(PVD)**

Eye surgery* (laser surgery and cataract surgery) or specialized treatment may be required for some conditions.

Local optometrists will continue to provide eyeglass services in our communities.

*Not available until 5/2026
