According to the local government, on July 5, the Board of Supervisors endorsed the Biodiversity Action Plan (BAP), the centerpiece of a new effort to implement the Comprehensive Plan. The board voted in favor of the plan, which was recommended by the Planning Commission.

The plan is designed to protect significant areas of biological importance, which are locations of special natural plant communities, unusual fauna, or other unique natural features. The BAP aims to protect these areas through land-use decisions, and it is scheduled to be implemented in the coming years.

The board’s approval of the BAP marks a significant milestone in the county’s efforts to conserve biodiversity. The BAP is expected to be an important tool for landowners and developers, who will be required to incorporate the plan’s recommendations into their projects.

The BAP is the result of a comprehensive review of the county’s land-use policies, and it is intended to provide a clear and consistent framework for future development. The BAP is expected to be an important tool for landowners and developers, who will be required to incorporate the plan’s recommendations into their projects.
