Are you a "weekend warrior", or have a student athlete in your family? Participating in any sport is often great for mobility and independence. The human foot is a complex structure comprised of 26 bones, 33 joints, and over 100 named muscles, tendons, and ligaments. If these structures weaken, possibly due to improper footwear, your kinetic chain is broken, which can lead to aches and pain. Being properly fitted for shoes or inserts by a doctor skilled in gait analysis is crucial for you to avoid injury and lead to ideal stance and peak performance.

Our clinic offers personalized gait analysis and can prescribe fitted or custom orthotics for your individual foot/training regimen. Schedule your appointment today at DeWitt Foot & Ankle Medical Clinic for a comprehensive foot exam and treatment approach tailored to your concerns.

We currently are accepting new Patients.

Our clinic offers many modalities which have mitigated the discomfort associated with this affliction, allowing you to walk pain-free.

DeWitt Foot & Ankle Medical Clinic

Call our office today to book an appointment FOR ALL YOUR FOOT CARE NEEDS!
