

Do you experience burning, tingling or numbness to parts of your feet or ankles? Do you sometimes feel as if “electric shocks” are radiating up your legs, or down to your pinky toes whenever you take a step?

If so, local podiatrist Dawn Chapin DPM advises you may be suffering from a condition known as Peripheral Neuropathy. This may manifest in a typical “stocking/glove” pattern often associated with metabolic disease conditions such as Diabetes. You may experience these needle-like pains only at night when trying to sleep, or it may have even progressed to a chronic, throbbing, aching heaviness felt throughout the day.

**Call today for your personalized medical and podiatric evaluation** by the trained doctor in our clinic. We have several treatment options that have been shown to address and relieve this painful affliction. **No need to wait to begin the best part of the rest of your life pain free.**

---

*Our clinic offers many modalities which have mitigated the discomfort associated with this affliction, allowing you to walk pain-free.*

*Call our office today to book an appointment  
FOR ALL YOUR FOOT CARE NEEDS!*
