

Beef Producers

I want to take a moment and visit about what our products can do for you. Most producers in our area have fescue dominant pastures. What most people are not aware of is endophyte fungus in the fescue when consumed causes higher body temperature which leads to all kinds of side effects from the stress. Reduced consumption means less weight gain of your cash crop (your calves). Pinkeye is also one of these side effects. Pneumonia is related to stress as well. Conception rates are also affected.

Our mineral and tubs have ingredients to help with these challenges. Two products can help with a Healthier Herd & Heavier Calves. FEB is a yeast cell wall that attaches to the toxin in the digestive system and removes the toxin through the manure. TRTM has your Copper, Iron, Manganese, Selenium & Zinc. 100% organic replacing your basic traces to help with a stronger immune system.

A cow with a calf consumes approximately 2-50# of mineral per year. Your investment is \$80 per cow/calf per year. This in my opinion is the best investment you can make in your herd for health.

Want to discuss further, please call me at 540-434-4601, Phil Liskey

Preventing health issues instead of spending Big Dollars to Treat!

Healthier & Heavier!

Cow Calf Hi-Mag 8-4-10 50#	\$23.95
