

Midtown Connector & Intermodal Gateway Project

Town of Bridgewater

Corridor Issues

HIGH CRASH CORRIDOR - Frequent crashes caused by high traffic volumes, unsafe turning movements, and conflicts between vehicles, pedestrians, bicycles, and freight.

UNSAFE INTERSECTION - Closely spaced, offset intersections force unprotected left turns and unpredictable traffic movements.

UNSAFE WALKING/BIKING - High-volume traffic, missing sidewalks and bike paths, and no safe east-west crossing limit access for pedestrians, cyclists, seniors, and people with disabilities.

DISCONNECTED GATEWAY - Vacant parcels, disconnected facilities, and lack of a central hub weaken access between Midtown, civic spaces, and major employers.

STORMWATER RUNOFF AREAS - Former gas stations and large asphalt areas lack stormwater controls, contributing to flooding, runoff, and water quality issues.
