2026 NUTRIENT STEWARDSHIP

Invest in your **SOIL HEALTH**
by utilizing the Haney Test

An investment in soil health testing is a cost-effective and sustainable strategy for modern agriculture. Many farmers overlook the hidden costs of not testing, which can lead to over-fertilization, reduced soil resilience, poor water retention, and lower crop yields.

TOP 3 REASONS

- Potential reduction in fertilizer costs
- Provides recommendations on cover crop use
- Soil health score measures health improvement over time
