IT'S TIME

Recently uncovered information revealed that Data Center Representatives have suppressed critical below grade conditions that were realized during permitting of the 2004 Catoctin Power Project, proposed before the Eastalco closure in 2005.

This critical discovery will mandate requirements for more robust Generator platform construction for specific positions.

IT'S TIME To Take Control

Therefore, we are electing a new and more responsive County Executive. One that will request the swift creation of a new **Data Center Oversight and Inspection Division** of the county government, so Frederick County will regain control from now on..

Another never seen proposal was in development stages after Eastalco shuttered. This proposal was designed to create a state of the art Resource Recovery Park to address growing concern related to the loss of landfill capacity.

This QR code will show the plan developed by the U.S. Fish and Wildlife Service, proposed back in 2002.
