

*Proven Leadership. Real Experience. Results for Klickitat County.*

My "opinion" on Data Centers: I keep my opinion out of my professional work; instead, I use a factual, evidence-based "stance" statement.

Bottom line: No County Commissioner would sign documents on something as impactful as a moratorium without legal counsel. Once we have that counsel, Commissioner Ihrig and I can proceed with the most defensible decisions and paperwork to support the Klickitat County citizens.

I believe some have played on fears of Data Centers and purposely divided our County. Let's leave that behind, identify what really needs to be done, and get to work.

Trust those with true background and work history. Mr. Ihrig and I have over 50 years of public service, extensive education in water resources, and expertise in electrical use and land-use planning. We will protect this County.

For those of you who haven't known me for 30 years:

- I have worked with the Klickitat County Planning Dept. since the 1980s.
- I served on the Planning Commission for 10 years.
- The Governor appointed me as Lead Administrator for our county, where I developed protections/documents for the White Salmon & Klickitat Rivers.
- I have a working background in water resources, planned growth, timber, and agriculture.
- I have handled negotiations with large industries and worked for years on brownfield cleanups.
- I have strong relationships with state and federal agencies and the Tribes.
- I understand permit systems and associated obligations.
- I believe in diverse boards and hearing everyone's voice.
- I stand up for what's right, and I don't run from hard subjects.

My background makes me the right Commissioner to tackle complicated issues like data centers. I appreciate your VOTE!
