Some people who drink water containing TTHMs in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer. Some people who drink water containing HAA5s in excess of the MCL over many years may experience problems may have an increased risk of getting cancer.

In December 1998, EPA set enforceable drinking water standards for TTHMs at 80 parts per billion (ppb) and for HAA5 at 60 parts per billion (ppb) to reduce the risk of cancer or other adverse health effects. Compliance with the TTHMs and HAA5 standards are determined by calculating a locational running annual average (LRAA) of quarterly TTHMs and HAA5 sample results. Compliance calculations performed for the second quarter of 2021 show that the system's current TTHMs LRAAs are 86 ppb at DBP03 – 22 Martha Drive. The system's current HAA5 LRAAs are 105 ppb at DBP03 - 22 Martha Drive; thus, the system is currently in violation of the TTHMs and HAA5 standards.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This is not an emergency. If it had been, you would have been notified immediately. EPA and LDH do not consider this violation to have any serious adverse health effects on human health as a result of short-term exposure; however, continued long term exposure to TTHMs and HAA5 levels above the standard (e.g., 20 years of exposure) has potential to have serious adverse effects on human health.

Greater Ouachita Water Company (GOWC) purchases water from the City of Monroe for the North Monroe Water System. The City of Monroe Water System operates a surface water plant which means they treat water from a bayou, stream, or river to EPA and LDH standards for drinking water.
