FLYING SQUIRREL

CONTRIBUTED PHOTO

Mike Thiele shot this photo of a flying squirrel. He noted these nocturnal squirrels launch themselves into the air and extend their fore and hind legs, which are connected to their body by flaps of skin allowing them to glide through the air. Thiele reports he has viewed four of the fliers at one time. In addition, he encourages readers to keep their hummingbird feeders up for a few more weeks. "This morning there were four at my feeder," he reported last week. "The locals have perhaps gone but those who nest further north are still coming through."
