

ALEXANDER BELL

THE TELEPHONE, A PATENT FOR A DEVICE WAS
SUBMITTED IN 1876

TELEPHONE

Alexander Graham Bell was born on March 3, 1847. He lived to be over 100 years old. He built the telephone at MIT, a lot of research goes on there. It has been for more than 150 years.

The telephone works because it goes through a wire for sound and converts sound from a human voice into electrical signals waves. Alexander changed the way people communicated with one another.

It's important because it allowed people to communicate, Alexander built a machine to speak. It also enabled real time communication over long distances.

In my conclusion, the telephone was the best invention because we still use it today to communicate with each other. The telephone was invented at MIT in 1876.

**ALEXANDER AND
THOMAS WATSON
FORMED THE BELL
COMPANY. ON
MARCH 10, 1876
THEY BOTH SPOKE
THROUGH THE 1ST
TELEPHONE**
