

THE FIRST MADE TELEPHONE

THE FIRST MADE TELEPHONE INVENTED BY
ALEXANDER GRAHAM BELL!

TELEPHONE!

I am writing about the telephone. The telephone didn't just invent itself. Alexander Graham Bell did. The telephone is a great invention. Now let's learn about the invention and the inventor.

The inventor and the invention. The telephone was a great invention because if Alexander Graham Bell didn't invent it people would have to meet up or send letters. The telephone was made on June 2, 1875. He made the telephone at MIT Massachusetts Institute Technology. MIT was held in London.

This is how it works. Somebody talks into a tube and the other person has a tiny tube the bigger tube that the person speaks into goes through. The sound travels through out it and goes through the tiny end which is in the other person's ear. And the other person can hear the message.

How the telephone was important. It was important because people would have to meet up or send letters. But when the telephone was made they didn't have to check the calendar or send letters.

In conclusion, That was about how the telephone was made and who invented it. All the fact's I know about Alexander Graham Bell. Alexander had two siblings Melville and Edward. Bell's father inspired him and he also learned how to play the piano. He was born on March 3, 1847.

**WHEN ONE DOOR
CLOSES ANOTHER
OPENS; BUT WE OFTEN
LOOK SO LONG AND SO
REGRETFULLY UPON
THE CLOSED DOOR
THAT WE DO NOT SEE
THE ONE WHICH HAS
OPENED FOR US.**
