

Radioactive waste removal plan

Radioactive waste will be taken to sites in Andrews, Texas and Clive, Utah, depending on the type of waste. The Texas location, Waste Control Specialists, accepts class A, B and C waste, while the Utah site, EnergySolutions, accepts only class A radioactive waste.

Radioactive waste will be live- loaded into soft-sided 9 CY IP-1 bags. It is estimated that, during active building demolition, between 10 and 15 IP-1 bags will be filled per day.

MU hopes to have a waste transportation company transport the bagged and other wastes offsite for disposal on a daily basis.

Most waste from the Pickard demolition will be class A waste, the class with the lowest radiation levels.
