

BIG NEWS NEW HOLLAND BALER IMPROVEMENTS 2026 RB451 BALER

RB451 IMPROVEMENTS

- **3.5x Thicker Forming Rolls:** The RB451 features new extruded, seamless steel rolls that are up to 350% thicker than the RB450's rolls, providing industry-leading wear resistance and structural integrity.
- **60% Larger Roller Windguard:** Now standard, the 8.4-inch diameter single roller windguard (up from the RB450's smaller version) provides superior crop compression for faster feeding and smoother flow.
- **Triple-Sealed Bearings:** Upgraded from standard seals, the RB451 uses new triple-lip sealed bearings throughout the pickup and bale-on-roller (BOR) areas to lock out dust and significantly extend service life.
- **IntelliView™ IV Plus Display:** Say goodbye to old-school keypads; the RB451 introduces a modern, full-color touchscreen interface with faster processing and better visibility.
- **Precision Data with FieldOps™:** Unlike the RB450, the RB451 is fully integrated with New Holland's FieldOps™ platform, allowing you to track bale location, moisture, and performance data from your smartphone in real-time
