5% OFF NEW EQUIPMENT

Applies to all parts and equipment in this catalog.

January 26-30, 2026

January 25-29, 2027

Refreshments all week!

*You may call your order in
anytime in January.*

TERMS AND CONDITIONS

You Cannot Order Parts Online!

To order parts:

- **Phone** **717-464-1043 Extension 1 or 2**
- **Fax** **717-208-3263**
- **Mail** (our business location) ... **259 Radcliff Road, Willow Street, PA 17584**

Business Hours:

6:00 am to 5:00 pm Monday through Friday. Closed Saturday, Sunday, and all major holidays.

Prices are subject to change without notice.

Shipping

Parts will be shipped by UPS, Truck Freight, US Postal Service or 9 - 5.

Warranty

Joe's Machinery LLC will warrant our product if it is a manufacturing defect. No warranties apply to crop failure or crop loss relating to defects on our aftermarket parts. We will replace and reship as we see fit.

We are concentrating on manufacturing an aftermarket replacement product for older New Holland equipment that is just as good as, if not better than, the original! If you cannot find what you need in our catalog, please give us a call!

Our main product line in aftermarket replacement parts is for the following products:

Mowers - NH 450, 451, 455, 456

Hay Rakes - NH 55, 56, 256, 258, 259, 260

Harvesters - NH 717, 718, 770, 782, 890, 892, 900, FP 230, FP 240

Crimpers - NH 402

Parts for all models of pull type haybines

Corn Heads - NH 824 and 360

We recondition and repaint any of these models that you have.

We accept all major credit cards.

Have your credit card available when ordering.

A 4% processing fee will be added to all credit card orders.

Please have the following information ready when phoning in an order:

part numbers, name, address, and phone number.

This speeds up the processing of your order and improves accuracy.

OUR STORY

We started Joe's Machinery in the year 2000. Mostly we were doing small repair jobs and custom welding. In 2001, we started buying and selling farm equipment. In 2003, we made our first aftermarket parts. In 2004, we sold our cows and moved off the farm to our current location. In 2005, we started doing hi-moisture corn grinding and bagging. In 2006, we built our first hi-moisture corn bagger.

In 2009, we created our first aftermarket parts catalog. In 2010, we built our first combo silage bagger. Also, that same year, we built an addition to the shop. In 2013, we built our first conveyor bagger. That same year, we added more storage room and a paint room, and enlarged our driveway. In 2018, we renovated the shop area for more production in manufacturing aftermarket replacement parts for New Holland equipment. Also, our bagging business turned into a full-time crew being out doing custom silage and hi-moisture bagging from the middle of August to late October. In 2022, we poured a large concrete pad in front of the store. In 2023, we bought the Farline Repair business. Also in 2023, we installed an air quality system for cleaner air throughout the welding shop.

We manufacture conveyor baggers with very high capacity, designed to keep up with a 12-row chopper.

See brochure in the back of this catalog! (page 171)

You can find us on the web by looking up: Lancaster Farming Joe's Machinery

We thank you for your business and look forward to serving you!
From all of us at Joe's Machinery

AFTERMARKET REPLACEMENT PARTS

We manufacture aftermarket replacement parts for all this New Holland® equipment. We ship parts by UPS, truck freight, 9-5, and US mail. Call for delivery options on larger equipment.

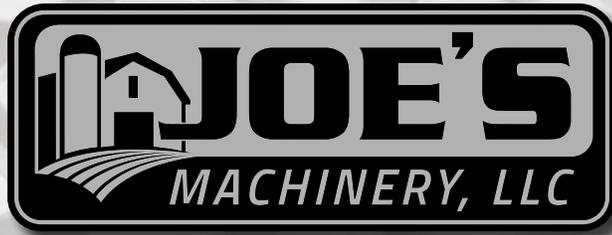

COMING SOON

A brand new Rola-Bar rake with all hydraulic drive and hydraulic lift like it should be is coming soon! Also, you can tilt the basket a lot for tighter roping, or fluff up for better drying. Watch for future ads or call!

Case IH® and New Holland® are Registered Trademarks of CNH Industrial America LLC which does not manufacture or endorse these parts.

Preserving Forage With Automation

\$790.00

comes with controller

Features

- All new pause controller has 99 different speeds and is very accurate
- All stainless and poly construction prevent rusting
- Quick-attach mount for easy switching between equipment
- Water resistant hopper and controller
- Can be used on cultivators, plastic layers, transplanter, harvesters, and round or square balers

Options

- Blower
- DeWalt, Milwaukee, or Makita adapters
- Star-Wheel Monitor: Applies preservatives to the forage based on star wheel speed

Ag Choice Applicators
Sold by:

Phone: 717. 464 .1043 Ext. 2 » Fax: 717-208-3263 » 259 Radcliff Rd. » Willow Street, PA 17584

Kit Components:

Kit 1 * Kit 2 **

\$790.00
comes with controller

Holds an average of 50 lbs. with light weight dry inoculate or almost 100 lbs. with high density inoculate.

LID \$51.00

RED QUICK ATTACH BRACKET \$42.00

Bolt this to your equipment for easy removal of applicator.

BLOWER KIT \$250.00

AUGER \$26.50

FEMALE CAMLOCK **

SLIM PACK

(3A, 12V Output)
For DeWalt or Milwaukee battery.

\$38.00
without remote

\$48.00
with remote

12 RPM MOTOR

\$130.00

ELBOW

\$53.00

WIRE \$48.00

25' Wire with Sensor and (6) Magnets

15' WIRE \$23.00

(16-4) Wire used from large controller to applicator and blower.

1 1/4" Hose Used with Elbow

3' Hose * with Kit 1

Hose \$4.12/ft

NH 450, 455 >> AFTERMARKET REPLACEMENT MOWER PARTS

New Holland® is a Registered Trademark of CNH Industrial America LLC which does not manufacture or endorse these parts.

Did you know there is a difference between the knife heads on your mower?

If you don't have the right knife head, your blades will not go over center on the center of the guard, but rather a 3/4" away from the guard. The results are that it is NOT cutting properly. ALWAYS check when you put new blades on your knife!

PART NUMBER	DESCRIPTION	PRICE	
JM13818	455 Head Needle Bearing (3 piece per mower)	\$18.30 each

27a	JM87395	1	COTTER PIN – 1/8" OD x 1 1/4" Long	\$0.28

NOTES

Ref. #2 JM48185 sometimes needs shimming to properly match with ref. #10 JM139034.

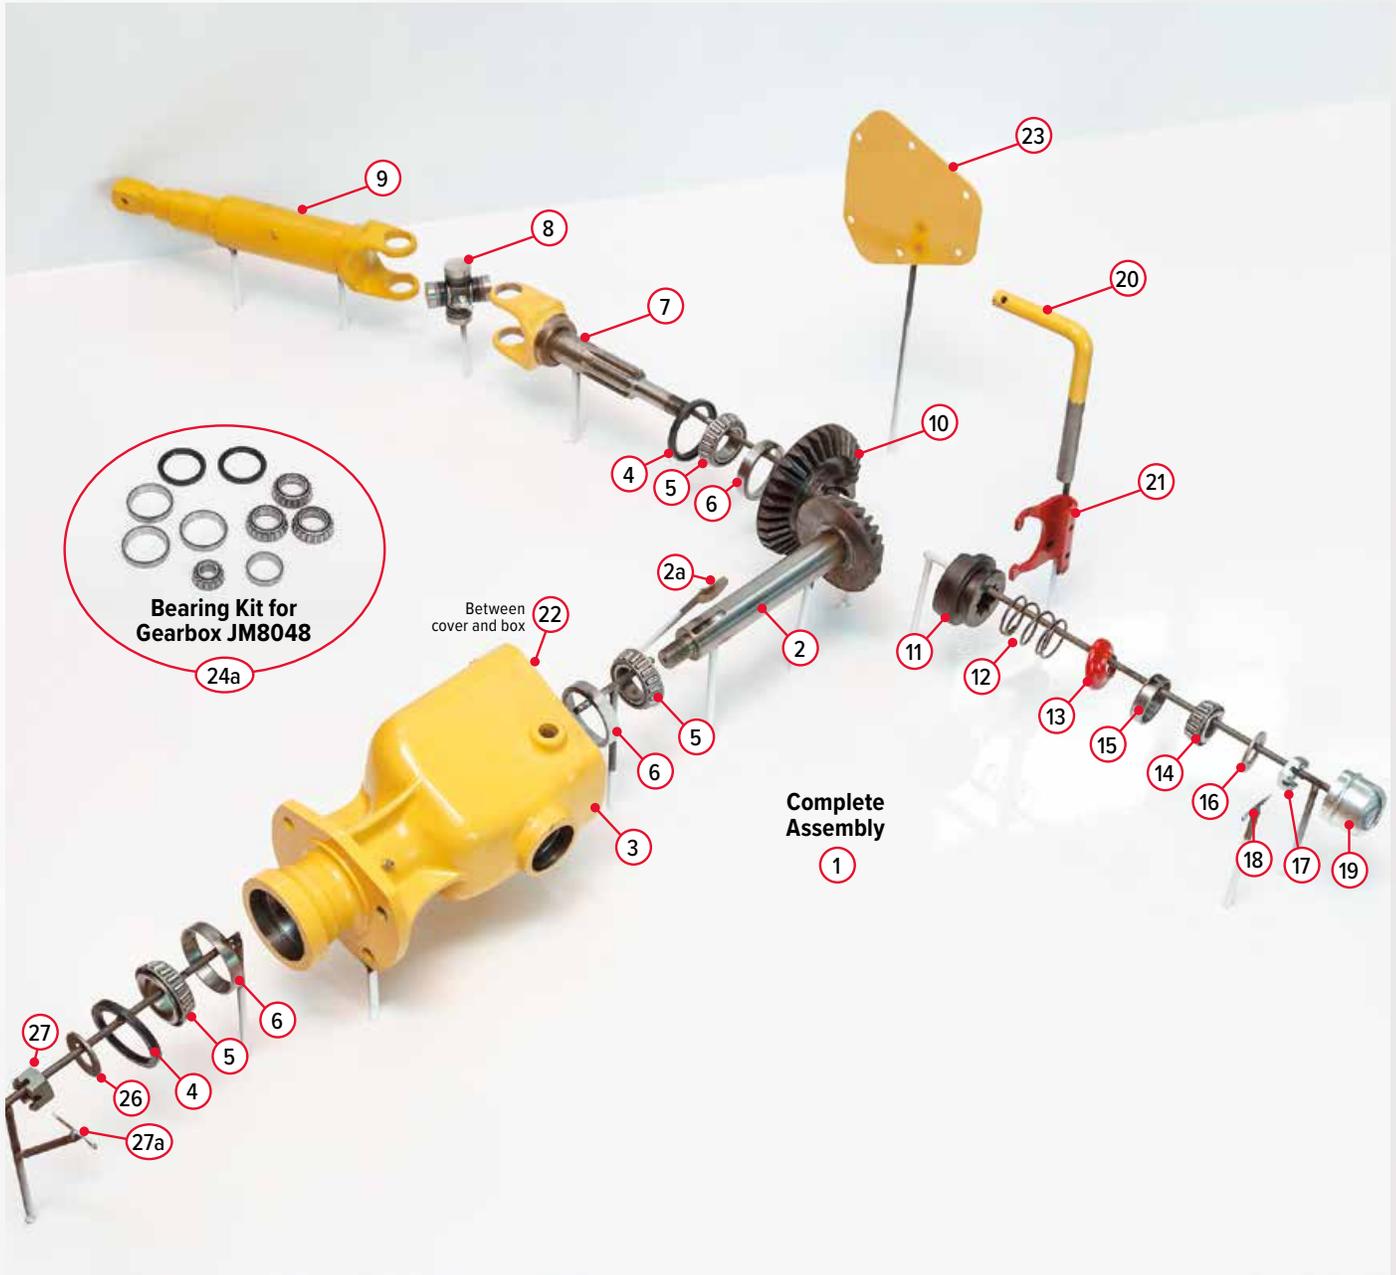

We use China bearings and races in the gearbox. Specify if you want timken.

Ref. #23 cover only uses gasket sealant, not a gasket. For gasket sealant, order Ref. #22.

When rebuilding gearbox, use grease pump grease only, but pack it into the front at star before installing the last bearing and also into the back before putting the last cover on. Fill to almost full. Check level annually!

AG CHOICE APPLICATOR

This auger applicator is the way to go!

Holds an average of 50 lbs. with lightweight dry inoculant or almost 100 lbs. with high density inoculant

**One controller fits all!
Now available with DeWalt or
Milwaukee Adaptors**

Your inoculant will be augered out
which eliminates clogging! Comes with
mounting brackets and wiring.

For use on balers, choppers, seeders,
planters, baggers and more!

PRICES SUBJECT TO CHANGE WITHOUT NOTICE

If you put your cutterhead in reverse to sharpen, but it doesn't turn

(Applies to all NH Choppers)

- 1 First, disengage reverse gears and try to turn it by hand. If it won't turn freely, clean out the obstruction by running chopper in forward.
2. Once cleaned out, if it does not turn freely, the friction plates might not be tight enough. On the end of the cutterhead shaft is a ring with four notches. We call it a stake nut. Use a hammer and punch and hit in a notch to turn the stake nut a $\frac{1}{8}$ turn to a $\frac{1}{4}$ turn tighter.
3. If this doesn't work, call for service.

To Adjust Stone

(Applies to all NH Choppers)

- Loosen T handle.
- Turn stone holder counter-clockwise until there are one or two threads showing on the bottom.
- Tighten T handle.
- Loosen cap using a large screwdriver in the notches on top, or if your cap has a hex shape, you can purchase the appropriate wrench from Joe's Machinery, item JM80312.
- Use a large punch (head on stone and tap the tip with a hammer) to drive the stone down.
- Retighten the cap and turn stone holder up or down to meet the knives.

To Replace Stone

- Tighten T handle.
- Completely remove cap.
- There will be a pipe sticking out of the stone holder. Remove it.
- Using a hammer and punch, remove remaining stone, short pipe, and two rubber washers. Check that there are no washers or dirt in the bottom of the stone holder.
- Open package with new stone and find two new rubber washers.
- Put one washer on stone and push $\frac{1}{3}$ of the way with short pipe. Install second washer behind short pipe.
- Place stone into stone holder with washer, pipe, washer down.
- Slide long pipe over stone until against washer.
- Reinstall nut. With stone holder threaded up, adjust close to knives and tighten nut.
- * *If your stone does not stay tight, disassemble and add an extra washer at the bottom.*

BEARING INSERTS

JM9011	FYH Bearing Insert - SA205-14FP9 Used on (7/8 bore) 717-718-770 smooth rolls on the RH side	\$23.18		
JM9012	FYH Bearing Insert - SA205-16FP9 Used on (1" bore) shafts, etc. Front table rollers, etc.	\$21.71		
JM9013	FYH Bearing Insert - SA206-18FP9 Used on (1 1/8 bore) 782-790-890-892 smooth rolls and bottom front feedrolls and drivers on original models	\$34.91		
JM38766	Bearing Insert - FYH SA206-20FP9 or FP7 Used on 824 cornheads, NH harvester augers, and more	\$28.99		
JM47066	Bearing Insert FYH SA207-22 FP7 Non-greasable (1 3/8 bore) For long PTO shafts on NH harvesters (782-790-890-892)	\$40.58		
JM52443	FYH SA208-24 FP7 Non-Greasable For long PTO on 900 harvesters	\$47.03		
JM225614	Bearing Insert FYH SA209-28 FP9 (1 3/4 bore) Used on several different harvester applications including 717, S717, 770 cutter heads	\$50.73		

We stock FYH and KML bearings in pillow block and inserts. Call with your needs!

Always specify if you need a greasable or non-greasable bearing insert.

FP9 is greasable · FP7 is non-greasable.

SA is for flat on back of bearing · NA is for bearing with lip

FYH bearings don't need much grease.

Most people over grease. Some people never grease. Some people grease all the time.

Our FYH bearings require only 1/2 pump a day or less.

*Want
More Milk?*

Process my corn silage and I'll eat one to two pounds less grain per day. I'll have a better butterfat and I will look prettier and be happier! My conception rate should improve too. After all that is done, I'll have a lot more milk for you,
The Dairy Farmer.

Install a *HORNING CROP PROCESSOR...*

...using the saw cut tooth rolls for more ripping power on corn.

***No need to look at cob in the bunk.
Much more consistent feed than unprocessed silage.***

Now Improved!

- » Less Belt Slippage
- » Roll Speed Differential Changed
- » Now Even MORE Ripping Power!

- » We have years of experience in crop processor and New Holland Harvester rebuilding.
- » We install new crop processors and replace worn out processor rolls on any New Holland pull type
- » An average 80-cow herd will pay for a processor in less than 2 years!

717. 464 .1043 » 259 Radcliff Rd. » Willow Street, PA 17584

Manufactured in Lancaster County, PA

HORNING CROP PROCESSOR OPERATING INSTRUCTIONS

1. **Shut off all power to machine before servicing**
2. Grease all bearings and zerks every 8 to 10 hours (Roll bearings $\frac{1}{2}$ to 1 pump each)
3. Bearings should operate under 200° F. Spit Test: If it doesn't sizzle (212°), assume normal operation
4. New belts should be checked every hour for the first 5 hours of operation, daily thereafter.
5. Check roll clearance daily.
6. Roll clearance should be $\frac{1}{16}$ " as a starting point.
7. Increase roll gap according to moisture.
8. It may be necessary to lightly tap adjustment blocks downward when decreasing roll gap.
9. Recommended cut length for corn silage is $\frac{3}{4}$ "
10. Emergency stop ($\frac{1}{2}$ " bolt with coupler nut between taper blocks) is factory set to keep rolls from hitting each other. See illustration A.
11. Large processor springs should be compressed to $4\frac{7}{8}$ ". (Rolls should not open under normal conditions)
12. If knives, etc. go through processor, measure springs. (Free length should be $5\frac{1}{4}$ ". Replace springs if less.)
13. Wash down unit at end of season and apply a coating of oil or grease to all unpainted surfaces, especially rolls.

Change over to Haylage

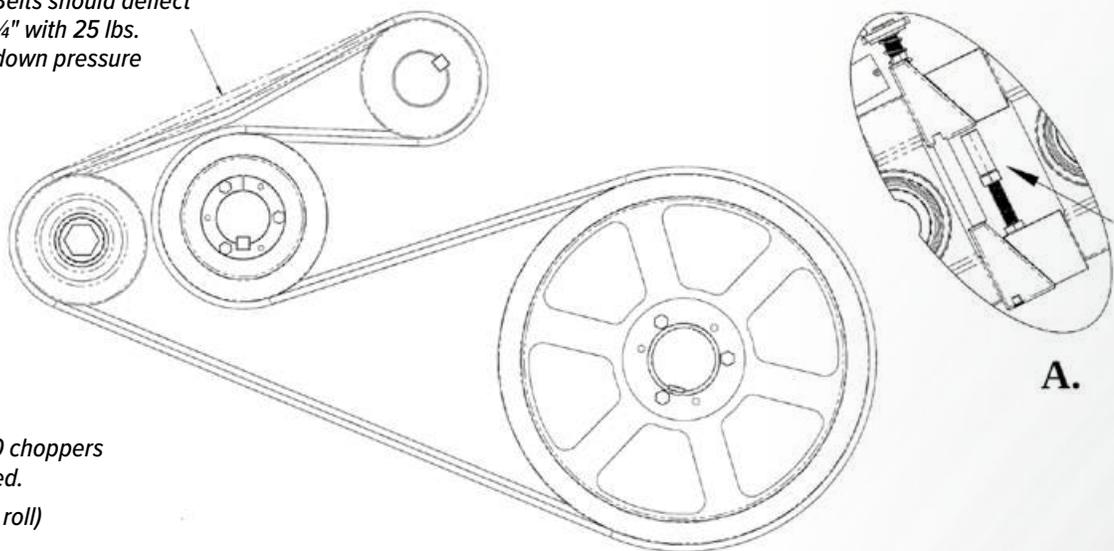

1. Release spring-loaded pins, and remove pan between auger and processor. (You may have to rotate auger to clear pan handle and latches.)
2. Slide air gap angle underneath cutterhead all the way back to improve air flow. Refer to harvester manual.
3. Remove belts for haylage.

Belt Tension

Tensioner spring should be compressed to $\frac{1}{8}$ " gap between spacer and washer. If your machine doesn't have a spacer, press down all belts at once. Belts should deflect $\frac{1}{4}$ " with 25 lbs. down pressure (4-belt model). See illustration below.

For ease of belt installation, adjust rolls completely together.

*Belts should deflect
 $\frac{1}{4}$ " with 25 lbs.
down pressure*

*2013 and prior, on 900 choppers
opposite roll high speed.
(Larger pulley on front roll)*

*Don't overgrease these processor roll bearings. ½ pump a day is plenty.
To save your rolls, winterize them properly by cleaning as soon as you are done in the fall.
Clean, then grease for the winter.*

Call for processor prices, installation and rebuild services!

Processing your corn silage has never been more necessary!

With the price of corn, why would you put it through the cow unused? They keep breeding corn for quicker kernel dry down to pay less at the grain bins for drying. Therefore, the kernel is ready before the stalk for corn silage! A lot of people get caught with kernels that are too dry.

ABOUT BELT KITS

BB 108K-4 Belt Kit is used on all 890-892 Harvesters on all FP230-FP240 2015 and earlier models.

FP230-240 used BB118K-4 on 2016 models and later.

900s used BB105 K-4 before 2005.

Then BB 108K-4 was used from there on except if the large pulley measures: 13.6". If so, then use BB-108 • 15.6" use BB-118

On all 782-790 Harvesters, use BB108-K3

HORNING CROP PROCESSOR TROUBLESHOOTING

Problem	Possible Cause	Solution
Hot bearings	Side strain from improper installation	Loosen collars to release strain, then re-tighten
	Over greasing	Use only ½ to 1 pump of grease per bearing
Plugging in front of rolls	Feed pan not installed properly	Position properly on top of lid
	Dried material on pan from previous season	Clean pan
	Knives too far from pan	Reset knives
	Roll teeth worn dull	Replace rolls
Processor rattles excessively when under load, from springs opening up	Springs too loose or smashed from foreign material	Measure free length of springs. If less than 5¼", replace springs
	Too long cob pieces	Reduce cut length to ¾"
	Rolls set too close for volume of crop	Adjust roll gap
Belts twisting, breaking or getting hot	Misaligned sheaves	Align sheaves
	Belts too tight	Properly adjust belt tension
	Pan bent or out of line	

Contact your dealer about any additional problems.

CHECKING PAN ALIGNMENT

NOTE: to check pan alignment, lay flexible ruler on inside of pan when installed. Slide ruler up toward roll till it hits, then feel where the ruler is hitting on roll. Should be within 1¼" of center of rolls. *Always wear gloves.*

MECHANICAL TRANSPLANTERS

New or Rebuilt with Your Choice of Tongue on Front, or Tractor Hitch

Always keep your planter shoe in like-new condition and work your ground loose for maximum performance!

Options

- » Trays on Front or Back as Shown
- » Steel or Rubber Wheels
- » 6 – 8 – 10 – or 12 Plant Pockets
- » 55 to 110 Gallon Poly Water Tank

You can get more depth by putting the lever way back and pulling bottom clip pin out. Release lever, put top clip pin down a few holes for more depth. Put lever back & put bottom clip pin in.

It's ok to have spring squashed. Put bottom clip up for higher lifting of main frame

Now standard with slip-in aluminum tongue and down pressure lever

This down pressure lever is designed to put your unit in the ground with force!

The spring lets the unit come up when going over a stone, etc. If you have problems with your drive wheels sliding, just put your lever down another notch. Customers are getting more pounds per acre with a mechanical planter than with a New Idea Planter, as all plants are spaced evenly.

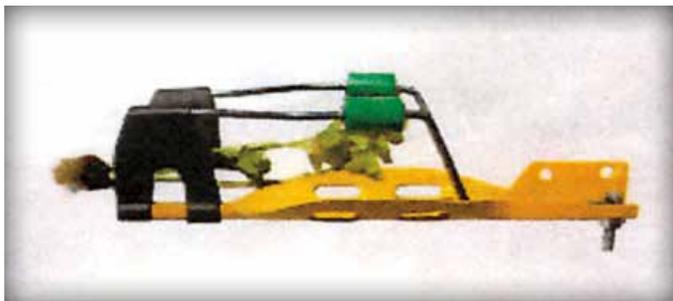

We can rebuild shoe if not worn down past notch.

**We Build
Planters!**

717. 464 .1043 » 259 Radcliff Rd. » Willow Street, PA 17584

MECHANICAL PLANTER ADJUSTMENTS

V-3 Standard Plant Placement

Deeper Plant Placement

Pocket Chain Instructions

1. Make sure that bolts holding the upper sprocket on the pocket chain are not too tight. This will cause unnecessary friction on the unit and possible slippage on packing wheel drive transplanter. Loosen the wing nuts if the chain seems too tight.
2. Tighten the wingnuts equally by the top sprocket to keep the chain running level at all times.
3. If in row spacings of 20" or greater are needed, use only 6 pockets. You may remove every other pocket or leave them on. This gives the same speed or greater as a 12 pocket chain.

Adjusting or setting the #395R Round Point Shoe

Note: The shoe is preset at the factory for almost all situations.

Follow these instructions only if plants are leaning or in extreme wet or dry soil conditions.

1. Whenever any adjustments are made, be sure to get the shoe directly square and straight in front of the opening of the packing wheels. Make sure that the pockets will run through the middle of the shoe.
2. In loose dry soil, the shoe should be adjusted closer to the packing wheel. This can be done by adjusting the diagonal brace on the shoe.
3. In wet heavy soil, the shoe should be adjusted away from the packing wheels. This can be done by adjusting the diagonal shoe brace.
4. Keep the shoe clean at all times. Do not allow dirt or trash to build up on the front or side of the shoe because this can cause too wide of a furrow that cannot be closed properly by the packing wheels. Poly covered shoes will eliminate this problem.

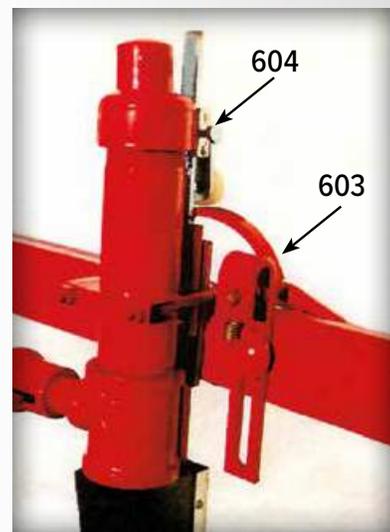

Water Valve Adjustment

1. For more water, make sure the valve is getting a full stroke by adjusting the #604 bracket on the pump rod. Make sure the valve does not over stroke. You should be able to lift the #604 rod $\frac{1}{4}$ " to $\frac{1}{2}$ " at the top of its stroke.
2. A broad range of adjustment can be achieved with the #603 water cam.
3. For wider spacings, the water cam may have to be raised so the water is on the plant. If the #603 is raised, be sure to raise the #604 water adjustment bracket accordingly and do not over stroke.
4. Tilting the #603 water cam back towards the water trips on the pockets will create a longer stroke of water or more water before and after the plant.

5. Always empty the water out of the valve after quitting for the day. Water freezing inside the valve will destroy the #610S and #612 balls inside the valve.

Proper Planting Position

1. Run the unit frame level to the ground. This allows the packing wheels to run in the proper packing position.
2. Running the toolbar too low will cause the packing wheels to run too light and not to drive or pack the soil properly.
3. Running the toolbar too high will cause the unit to not float properly, especially through low spots.
4. For proper float, lengthen your top third arm to tilt the clamp hitch back. You should have $\frac{1}{4}$ " to $\frac{1}{2}$ " of space between the pick up plate on the bottom of your clamp hitch. When the clamp is tilted back, the frame must tilt parallel to the ground when the unit is in the soil and ready to plant.

Example: At 20" plant spacing, the #603 water cam should be adjusted nearly all the way up the slot. The #604 water adjustment must also be adjusted accordingly so a $\frac{1}{2}$ " remains on the #604 stroke.

MECHANICAL PLANTER TROUBLESHOOTING

Problem

Solution

Packing wheels not packing properly

- A. Lengthen third arm on tractor to get float in hitch
- B. Hitch is too far down and needs to be lifted
- C. Clean off side of shoe
- D. Work soil deeper
- E. Add weight to back of unit
- F. Poly shoes will eliminate soil building up on the outsides

Water leaks from top of water valve

We now offer a different solution!

- A. Check to see if the rubber nipple inside the top of the valve is in place and rounded.
- B. #610 ball inside the valve has collapsed and needs to be replaced.

Water leaks from bottom of water valve

- A. Rubber ball #812 on pin is broke and needs to be replaced
- B. The nylon nut on the bottom is broken and needs to be replaced

Water not uniform

- A. Make sure all the water trips on the pockets are in good shape and at even distance from the attachment link.
- B. Check to see that all springs on the water valve are in good working order.
- C. Water valve has dirt or residue build up that needs to be cleaned out
- D. Rocker rubs on pocket guide

Plants falling out of pocket

- A. Inspect the rubber grippers to make sure that they are not all stretched out,
- B. Tighten the L-bolt on the side of the guides.
- C. #482 pocket extension may be needed if planting cell-type plants.
- D. Check bottom of guides to insure that the pocket is not releasing the plant too soon.

Plants on top of soil

- A. Cut back on water because the plants are floating up out of the shoe.
- B. Plants need to be pulled further out of the pocket to put them deeper.
- C. Too much loose soil is getting inside the shoe before the packing wheels can pack. Move shoe closer to packing wheels.
- D. A gap might be occurring by having the hitch too low causing the packing wheels to be up in the air or not being able to put enough pressure on the soil.
- E. Ground not worked deep enough causing the shoe to not go deep enough into the soil.
- F. Our OE 73 weight bracket will help get the shoe deeper

Plants leaning

- A. Need to put plant further in the pocket to keep it from hitting the bottom of the furrow,
- B. Possibility of needing a deeper shoe.
- C. May need #482 extensions to help support the cell of a plant coming from a tray.

Packing wheel drive slippage

- A. Models with Direct Drive Float Wheels eliminate this problem.
- B. Extra weight may be needed to keep the packing wheels down,
- C. Make sure the frame of the unit is running parallel to the ground.
- D. Check to see if the third arm on the tractor is adjusted to allow float in unit hitch.

Changing the Spacing Sprocket

- A. Push down on tightener and remove chain off of front sprocket
- B. Push tightener and sprocket in.
- C. Remove pin inside sprocket.
- D. Slide spacing sprocket off shaft.

PLANT SETTING CHARTS

For any other number of plants per acre:

Take the plant spacing and multiply by the row spacing, then divide by 144 = (answer)

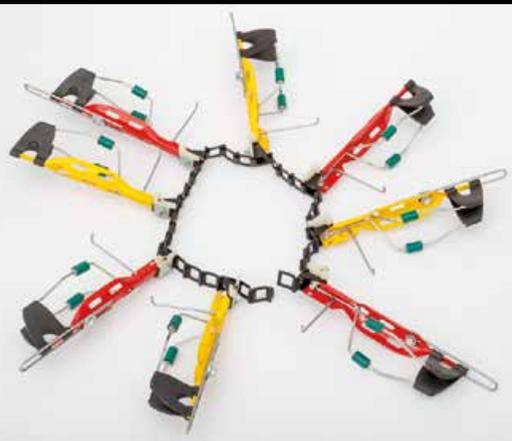

Then, 43560 divide by (answer) = _____

We set our new mechanical planter at 7,497 plants per acre. The **six circled numbers** in the charts on this page show our settings.

MECHANICAL SETTINGS For units prior to 1990 chain plant spacing chart						
POCKETS ON CHAIN	NUMBER OF TEETH ON SPACING SPROCKET

NEW HOLLAND HAYLAGE CHOPPERS

We Build and Modify NH Harvesters to Fit Into Your Barn Just the Way You Want It!

This unit works great with a round bale unroller.

This unit works great with small square bales.

Benefits

For round bales order with a table.

For small square bales a hopper is sufficient.

- » No more long stem hay in cowbeds and gutter grates
- » It is proven that cows will eat more dry matter and make better butterfat.
- » Easier to get lesser quality hay into the cow.
- » **MORE MILK!**

This unit is equipped with a 35 hp Vanguard motor!

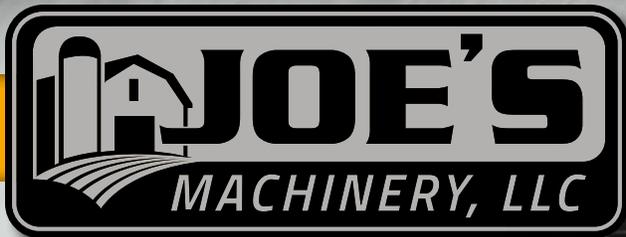

Research shows approximately **\$1,000 to \$1,500 in savings per year** by not wasting your hay to the gutter grates!

Continued research has shown how important it is to chop your hay, and farmers tell us that their actual savings and benefits are far greater than our estimate!

Hi-Moisture Bagger Tonnage Chart

5 ft. Bagger with 190 H.P. tractor,
fuel & 1 person included to help.

6.5 ft. Bagger with 190 H.P. tractor,
fuel & 1 person included to help.

**We Do Custom
Bagging!**

SHELLED CORN – 6.5 ft. Bagger

Tons per 6.5 x 100 ft. Bag60 tons or 2100 bushel

Tons per 6.5 x 150 ft. Bag98 tons or 3430 bushel

Tons per 6.5 x 200 ft. Bag135 tons or 4725 bushel

Approximately 25 Bushels per Filled Foot

SHELLED CORN – 5 FT. BAGGER

Tons per 5 x 100 ft. Bag35 tons or 1225 bushel

Tons per 5 x 150 ft. Bag57 tons or 1995 bushel

Tons per 5 x 200 ft. Bag78 tons or 2730 bushel

Approximately 15.83 Bushels per Filled Foot

Shelled corn at 56 lbs. per bushel shelled corn ÷ by 2000 lbs.
per ton equals = 35 bushel per ton.

5 ft. Bagger is .44 tons per ft. shelled

6.5 ft. Bagger is .75 tons per ft. shelled

For cob, you get approximately 20% more product off
the field.

These figures are only approximate figures and are based on any
moisture of corn. We are not liable if for any reason these figures will
be used to charge your customer for corn and figures are proved to not
being true! We will shell your pile of corn in the fall, then grind and bag it!

Ag Choice Applicator

Has an auger for less maintenance
and is competitively priced with
the original gandy.

(This is for dry inoculant only)

These applicators are ready to put on your
baler, chopper, blower, bagger, corn planter
and more.

We sell parts for these baggers. The mill
parts will also fit your Gehl grinder mixer.

NEW HOLLAND HAY RAKES

AND TANDEM HITCHES

Call for Options! 717.464.1043

No More Clogging or Dragging!

9 or 13
HP Honda
Hydraulic
Units for
Sale

**Made to fit into the rake frame,
making it look like it belongs there!**

- » We have NH258 and NH260 rakes in stock! Call for pricing.
- » We sell hydraulic drive kits for rakes to hook to your tractor.
- » Our customers prefer a Rolabar® rake over spinner and wheel rakes. You get a tighter roll and less dirt and stones in your hay!

BEFORE

- We buy, sell and trade!

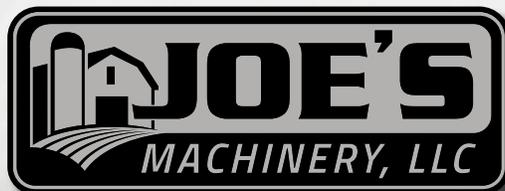

AFTER

- We rebuild to like-new condition!

- » When you buy a complete outfit with tandem and two rakes, you also have the option of simply disconnecting four hoses and reconnecting two hoses (all by quick couplers), and you can go with just one rake!
- » You can also use as a regular hydraulic unit to run your elevator, etc.

**Hay Rakes are
Available on Rubber
or Steel Wheels**

REDSTAR Rakes

Adjustable Hitch

Hitch adjusts up and down to your tractor hitch heights.

Legal Width Transport

Pull the pin and swing the tongue to transport on a trailer for legal width transport.

Hydraulic Flow Divider

For rake bar speed adjustment

This Top Link is Designed to Tilt the Basket

Tilts back to fluff up hay for quicker drying, and straight up for a tighter rope and a better solid round bale! A feature worth looking into!

Tail and turning signal lights with ag plug

Heavy-duty implement tires

Double Action Pivot Point

for a higher lift off the ground

REDSTAR Rakes

Raises 20 Inches!

From the ground to the tip of the tooth.

Install 150 Teeth for Cleaner Raking

Uses same teeth as NH258.

Hydraulic Motor Drive!

No gearbox or PTO to worry about. Much smoother raking!

Flotation Tire

With hand crank jack for height adjustment.

A Very Simple Fix...

...to change bar bearings. No binding action!

REDSTAR *Rakes*

Bagger

Seal your profits!

...a faster, heavier, better bagger!

Our **Bagger** is uniquely designed for high-volume bagging, and accommodates a wide variety of crops. Our **Bagger** is available in 6, 8, 9, 10, & 12 feet. In most cases, our **Bagger** will keep up with a 10-row chopper!

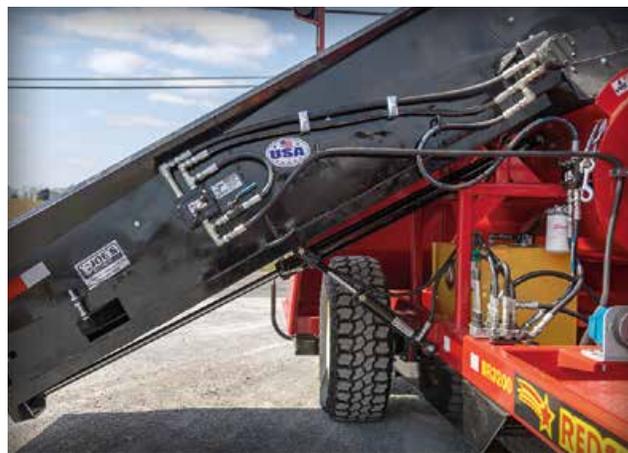

Conveyor Features

The extra-wide conveyor has tapered sides and slat belting for fast, easy unloading. Our bagger has handy hydraulic, adjustable flow divider for greater speed.

Conveyor Hydraulics

Hydraulic cylinders slide and tilt the conveyor for your convenience. As soon as your wagon or cart is empty, simply pull the hydraulic lever, and bring the conveyor in! No more crashing into the conveyor!

717. 464 .1043 » 259 Radcliff Rd. » Willow Street, PA 17584

Manufactured in Lancaster County, PA

Hydraulic Features

A 30-gallon hydraulic reservoir tank with cooling pipes eliminates the hot oil. A hydraulic pump runs off the main drive line, including a flow divider for speed adjustments and two spool valve levers: one to slide the conveyor, and the other to tilt the conveyor.

Optional: Controls to tractor (order separately)

Hydraulic Self-Contained System

The hydraulics are all self-contained for hassle-free operation. Just place the bag on, engage the PTO, operate the hydraulic levers, *and you are bagging!*

Customer Testimonials

“There is no bagger or blower on the market that is as user-friendly, and unloads as fast as this bagger.”

- Jerome Rhoads, PA

“I am very impressed with the simplicity of this machine. You can rent it out, or operate it yourself.”

- Ray's Repair, IN

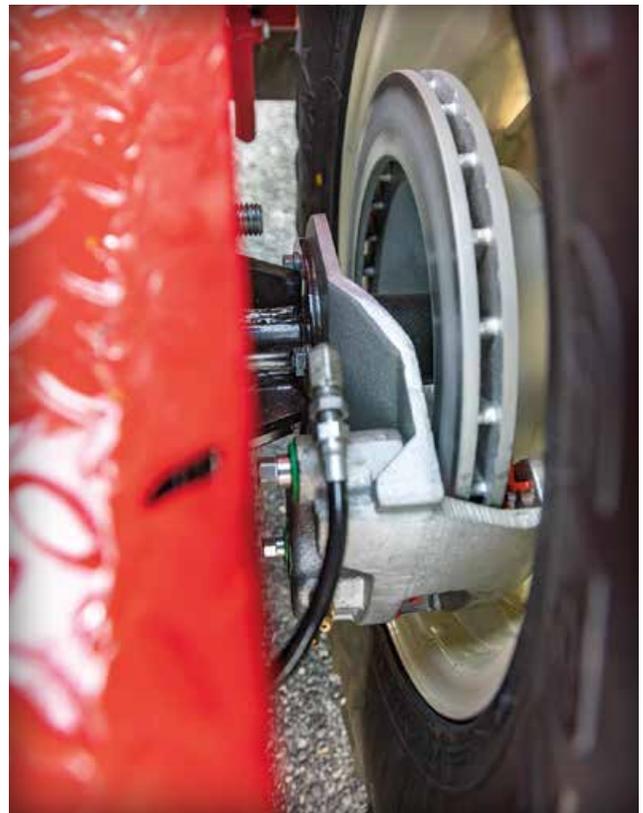

Rubber Tires

Rubber tires are rated at 65 MPH. At this speed, the bagger still tows...*just like a trailer.*

Disc Brakes

The disc brakes are featured with a hand pump for perfect adjustment, so the wheels do not slide. You can also use an adjustable rod on your tractor brakes to assist with bagger brakes.

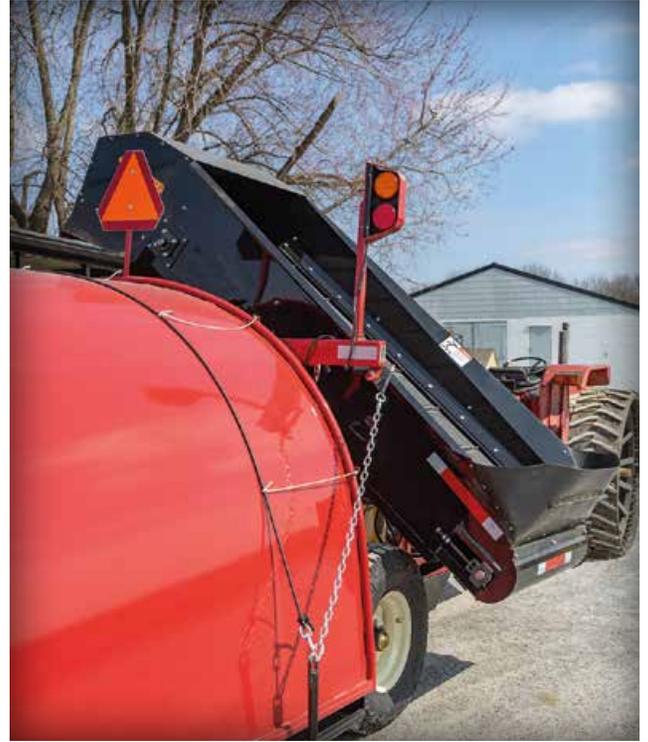

Packer Auger

Our packer auger juts out the back of the bagger and tapers down to allow the feed to release off the taper for a smooth finish, and a completely full bag. *No back stop is needed!*

Bag Pan Feature

A hinged bag pan drops down and a bungee rope snaps loose for easy bag loading.

Lights

Standard lighting features include steady tail lights, blinking tail lights, and turning signal lights.

Optional: Work lights

Bag Storage Platform

A large platform is provided for convenient bag and PTO storage. It offers plenty of space for whatever you need.

CHECK OUT OUR *Drag Mat System!*

Use our **Drag Mat System** for much more uniform packing. The weight of the filled bag holds down the mat. You'll use your tractor brakes much less. And, the bag fills up more uniformly.

Photo at right shows the mat extended by a long hydraulic cylinder. This makes it very user friendly!

USER FRIENDLY
Drag mat offers much more uniform packing!

The mat rolled in the whole way for easy transport. This unique drag mat system is standard on every bagger! It hooks up to the standard hydraulic system already on the bagger.

Quik-Attach Tunnel

FEATURES

Our **Quik-Attach Tunnel** can be changed in 15 minutes or less. Consider our tunnel clamp option to operate with a forklift. Open the four clamp levers, clamp the tunnel, and exchange them. Also, the lights are mounted on each tunnel.

The back end of the bagger with six taper pins and four lever clamps that attach the tunnel to the bagger.

The Quik-Attach clamp-on levers. All our 6, 8, 9, 10, and 12 ft. tunnels fit the same bagger. This allows you to own one bagger and any or all size tunnels to fit all your customers' needs!

REDSTAR

Bagger

...a faster, heavier, better bagger!

Seal your profits!

Bagger Models

6730 6-ft. bagger

8730 8-ft. bagger

9730 9-ft. bagger

1030 10-ft. bagger

1230 12-ft. bagger

Bagger Options

(available on all bagger models)

- » Work lights
- » Hydraulic controls to tractor
- » Bag cradle with forklift pockets
- » Forklift pocket tunnel clamp

Call for more information!

Forklift Mounted Bag Cradle

Made to fit the tunnel for easier mounting of the heavy bags. You may need to lift the bag on the cradle with a forklift, and from there on it is easy to mount the bag on the tunnel.

Forklift Mounted Tunnel Clamp

Drive to the rear of the tunnel, pull a lever to clamp the tunnel, and change to different sized tunnels in just minutes,

Long Auger at 24" Diameter

A very heavy-duty auger! Large enough to eliminate "juicing" that occurs during feeding. This auger does not "chew up" silage while packing, which assures you a higher quality feed. *It is proven by feed salespersons!* When running above 175 HP, use 1,000 RPM PTO. For the best packing results, we recommend 2,000 RPM. When running at 540 RPM, simply throttle to PTO speed.

Drive System

Our drive system is heavy-duty built, and made for 250 plus horsepower. The Double 80 USA-made chain assures you to pack silage...all you want!
