Top tips for safe shoveling

Snow removal is a risky business. It can cause back injuries, exacerbate heart problems or even lead to frostbite. To stay safe when shoveling, follow these tips.

Use the right equipment

Wear warm, non-slip boots and dress in layers of warm clothes that dry quickly. Make sure your head, ears and hands are covered. If it's really cold outside, also cover your face.

Choose a shovel that's lightweight, made of plastic or aluminum and has a curved shaft that reaches your chest. In fact, it's best to have two shovels — a larger one to push the snow and a smaller one to lift it.

Employ the proper technique

Don't wait until too much snow accumulates before you start to remove it and give yourself ample time to complete the chore. If you rush through the task, you're more likely to injure yourself. Also, take a few minutes to warm up and stretch before going at it full force.

The American Heart Association suggests waiting to shovel after eating because a full stomach can put pressure on your heart during physical exertion. You might also want to avoid shoveling in extremely cold weather.

Be sure to use abrasives like sand and salt to minimize your chances of falling.

To push the snow, place your feet and hands hip distance apart and keep the shovel close to your body. When you lift the snow, remember to bend your knees and walk to put it down instead of trying to toss it over your shoulder. Find a good rhythm and don't forget to take regular water breaks.

Buying a snowblower: types and features

Are you on the hunt for the perfect snowblower? Wondering which one you should buy? Here's what you should know about the different available types.

- **Electric shovels:** ideal for small areas like balconies, sidewalks or very small driveways. They can remove snow up to four inches deep.
- **Electric snowblowers:** best for small, flat driveways. They're typically unable to remove icy or heavy snow.
- **Single-stage snowblowers:** also best for small driveways with trouble lifting icy and heavy snow. They can remove up to eight inches of snow.
- **Two-stage snowblowers:** suited for long, wide or sloped driveways. They have no problem moving over eight inches of snow, even if it's heavy or mixed with ice. However, they take up a lot of room, so make sure you have sufficient storage space.
- **Three-stage snowblowers:** perfect for large driveways and areas that regularly get huge amounts of snow. They can be up to 50 percent more powerful than two-stage snowblowers.

Now that you've determined the type of snowblower you need, you can start looking at the different models that are available. Some have heated handgrips. Others come with power steering, a feature that makes using a big machine much easier.

It's best to invest in a popular brand because if replacement pieces are ever needed, they'll be more readily available.

Always buy the best model of snowblower you can afford. Inexpensive ones tend to require more in the way of maintenance and repairs.
