Bag Limits

Antlered Buck Deer: The statewide bag limit on antlered buck deer is one (1) buck per day and three (3) per annual season. One (1) of these three (3) may have hardened antlers that do not meet the zone legal antler requirements on private land and Holly Springs National Forest. Only two (2) antlered deer may be harvested from the South Delta Zone. For youth hunters fifteen (15) years of age and younger, hunting on private land and authorized state and federal lands, all three (3) of the three (3) buck bag limit may be any antlered deer.

Antlerless Deer:

Private lands: The statewide annual bag limit on antlerless deer is five (5). Antlerless deer are male or female deer which do not have hardened antler above the natural hairline. Only two (2) antlerless deer may be harvested from the Southeast and South Delta zones. There is no daily bag limit on antlerless deer in the Northeast, East Central, Southwest, and Delta zones. Only one (1) antlerless deer per day may be harvested in the Southeast Zone.

U.S. Forest Service National Forests: The bag limit is one (1) per day, not to exceed five (5) per annual season except in the Southeast Zone, which is two (2) per annual season.

Legal Weapons

Youth Gun: Youth may carry and use any firearm with which they can safely hunt, and in compliance with other applicable laws, rules, and regulations.

Archery: Longbows, recurves, compound bows, and crossbows. There is no minimum or maximum draw weight. There is no minimum arrow length. Fixed or mechanical broadheads may be used.

Primitive Weapons: Weapons legal for use during the Primitive Weapons season are all archery equipment and primitive firearms. "Primitive firearms," for the purpose of hunting deer, are defined as single or double-barreled muzzle-loading rifles of at least .38 caliber; OR single shot, breech loading, metallic cartridge rifles (.35 caliber or larger) and replicas, reproductions, or reintroductions of those type rifles with an exposed hammer; OR single or double-barreled muzzleloading shotguns, with single ball or slug. All muzzleloading primitive firearms must use black powder or a black powder substitute with percussion caps, #209 shotgun primers, or flintlock ignition. "Blackpowder substitute" is defined as a substance designed, manufactured, and specifically intended to be used as a propellant in muzzleloading or other black powder firearms, excluding modern smokeless powder. Metallic cartridges may be loaded with either black powder or modern smokeless powder (cartridges purchased at sporting goods stores). Telescopic sights are allowed while hunting with any primitive firearm during the primitive weapon seasons. A telescopic sight is defined as an optical sighting device with any magnification. During any open season on deer with primitive weapons after November 30, a person may use any legal weapon of choice on private lands only, if the person is the title owner of the land, the lessee of the hunting rights on the land, a member of a hunting club leasing the hunting rights on the land, or a guest of a person specified above. If the person is required to have a hunting license, the person must have a primitive weapon license, Sportsman's License, or a Lifetime Sportsman's License.

Gun: There are no caliber or magazine capacity restrictions on firearms. Primitive weapons (as defined above) and archery equipment may be used during gun seasons.

Legal Bucks

Northeast, East Central, Southwest, and Southeast Zones

A legal buck is defined as having EITHER a minimum inside spread of 10 inches OR one main beam at least 13 inches long.

How to estimate a 10 inch inside spread:

Estimating a 10 inch spread is accomplished by observing a buck's ears in the alert position. When in the alert position, the distance from ear-tip to ear-tip measures approximately 14 inches. If the OUTSIDE of each antler beam is 1 inch inside the ear-tip, the inside spread is approximately 10 inches.

How to estimate a 13 inch main beam:

To estimate a 13 inch main beam, the buck's head must be observed from the side. If the tip of the main beam extends to the front of the eye, main beam length is approximately 13 inches.

Delta Zone

A legal buck is defined as having EITHER a minimum inside spread of 12 inches OR one main beam at least 15 inches long.

How to estimate a 12 inch inside spread:

Estimating a 12 inch spread is accomplished by observing a buck's ears in the alert position. When in the alert position, the distance from ear-tip to ear-tip measures approximately 15* inches. If the OUTSIDE of each antler beam reaches the ear-tip, the inside spread is approximately 12 inches. (Therefore, if the outside of both antler beams reach the ear tips, the buck is legal).

How to estimate a 15 inch main beam:

To estimate a 15 inch main beam, the buck's head must be observed from the side. If the tip of the main beam extends between the front of the eye and the tip of the nose, main beam length is approximately 15 inches.

*Due to body size differences in the Delta Zone, ear-tip to ear-tip measurements are slightly larger compared to the other zones.
