

Helping small businesses achieve success

When small businesses need help achieving their goals, Bruce Sheridan knows he can help.

As a Certified EOS® (Entrepreneurial Operating System) Implementer and EOS Worldwide Equity Partner, Sheridan has a proven track record of helping small business owners discover joy in the journey and lasting success.

"The goal of **EOS Worldwide** is for our clients to grow revenue faster, increase profit margins, minimize employee issues and have time to pursue their other passions," said Bruce, who has 40 years of experience in leadership training.

He explained that most business owners spend too much time doing work that they don't like and are not good at. The EOS system helps them reassign responsibilities

within the company to ensure that every member of the team is 100% vested in executing the company's vision and enjoying what they do.

"We focus on three things – the company's vision, its traction and developing a healthy leadership team," Bruce said. "Vision results when the entire company knows where the business needs to go and how to get there. Traction comes from instilling focus, discipline and accountability throughout the company so that everyone executes its vision every day. Finally, healthy leadership results when you have a coherent, functioning team that enjoys working together.

"We estimate over 300,000 companies have actively been engaged in using and learning EOS. Simply put, the system works. Want to learn more? We offer a no-risk guarantee. There are no contracts or long-term commitments. If we aren't adding value, we don't want to get paid."
