			840	1000	100.0			
FACILITY SCORE								508.3222

Legend / explanation:

0 = criterion deficiency

1 = below standard

2 = meets minimum

3 = exceeds standard

4 = exemplary

scoring system utilizes 0-4 points for each element, in each section (see scale at right)

a relative weight has been assigned to each Section; this is a % of total Trauma Facility essential functions

the relative weight is assigned to each Section, translated into best possible (perfect) score in section = wt % X10 Total = 1,000

the modifier ensures relative weight assignment, balanced against number of elements met and points scored

IFAC Score = Modifier X Raw Points
