

## *Protect tomorrow with a simple screening today.*

March is **Colorectal Cancer Awareness Month**, a reminder that prevention starts with action. Colorectal cancer is the second leading cause of cancer death in the U.S., yet it is also highly preventable.

A colonoscopy allows physicians to find and remove precancerous polyps before cancer develops, giving you peace of mind for years to come. Most procedures take about 30 minutes, and you can return to normal activity the same day.

At Faith Regional, your screening is performed by board-certified general surgeons Dr. Nicholas Boyle and Dr. David Keleny who focus on precise and thorough care right here at home. While most patients need only a routine colonoscopy, our clinic is connected to hospital resources, providing extra peace of mind if higher-level care is ever required seamlessly.

Adults age 45 and older, individuals due for repeat screening, or those with a family history of colorectal cancer, should schedule their colonoscopy now. Take part in Colorectal Cancer Awareness Month and make prevention a priority by **scheduling an appointment at (402) 844-8325.**
