Whatever your opinion about hearing aids before 10 seconds ago, you can forget it. Now there is an amazing new hearing technology that not only gives you the most incredibly improved hearing but thanks to the latest advances in digital bionics provides much better value than other rival aids. Called Oh!, its revolutionary design actually mimics the natural sound selection processes of the human ear more faithfully than anything before it.

**NEW BREAKTHROUGH**

Inside the Oh! is multi-core processing, similar to the technology in today’s most advanced computers. Incoming signals (speech and ambient sounds) are analyzed, identified and classified every six milliseconds to adapt the hearing instrument for comfort and clarity.

In a space the size of a match head, the laboratory has managed to fit automatable complex programs that eliminate feedback, optimize speech understanding in noise, and enhance telephone listening.

**PURE NATURAL CLARITY**

The Oh!’s ingenious system controls noise in six situations: Quiet, Machine Noise, Wind, Speech in Noise, Pure Noise, and Speech. Because your lifestyle is unique, your hearing aids will be preset up to five levels of adaptation for each noise category, which means you will be able to understand speech in background noise like never before. Oh! is also designed so you’ll experience virtually:

- **No Feedback**
- **No Echo**
- **No Whistling**
- **No Wind Noise**

**As Seen On…**

*CNN* reports: “Phone calls, FaceTime® chats, music, movies, turn-by-turn navigation or other audio can be streamed directly to a small earpiece. When they’re not pulling in audio from a smart phone or tablet, the hearing aids work like normal, picking up in-person conversations and surrounding sounds.”
