

# Do You Believe These Myths About Your Peripheral Neuropathy?

Peripheral neuropathy or “nerve damage” is one of the most chronic conditions in the U.S., affecting over 20 million Americans.

Neuropathy results from injury to the nerves in the legs and feet. This disrupts the body’s ability to communicate with its muscles, organs and tissues. Most people don’t recognize neuropathy’s symptoms, which are:

- Pins and Needles feeling
- Numbness in the hands or feet
- Tingling or burning sensations
- Weakness in the arms or legs
- Sharp shooting or burning pains
- Balance problems

These annoying problems may come and go... interrupt your sleep... or even make your arm or leg feel weak at times. But even if you’ve had neuropathy symptoms for a while, there are 3 common myths I often see with this condition.

## Myth #1: Thinking More Pills Are the Only Solution

A common treatment for many nerve problems is the ‘take some pills and wait and see’ method.

While this may be necessary for temporary relief of severe symptoms, using them long term is no way to live. Some of the more common drugs given include pain pills, anti-seizure medications, and antidepressants – all of which have serious side effects.

Why not look for a drugless solution instead of just covering over the pain?

## Myth #2: Assuming Neuropathy is Only Found in Diabetic People

Diabetic patients are not the only group to suffer with this condition. Actually more neuropathy sufferers are non-diabetic than are, according to a recent 2009 study.

Here’s what the study, done by The Neuropathy Association revealed...

**Many neuropathy patients are surprised to learn these common myths aren’t true. Have you heard them before?**

“Neuropathy is often misrepresented as only being diabetes-related. However, this survey demonstrates that for every diabetic neuropathy patient, there are at least six more patients suffering with various neuropathies...” – Dr. Thomas H. Brannagan III, medical advisor for The Neuropathy Association.

At the end of the 30 day trail, all 49 subjects had partial restoration of feeling in their feet. – *Journal of the American Podiatric Medical Association.*

98% of patients reported having a “significant reduction in pain” – *Journal of Diabetes and its Complications.*

## Myth #3: Believing Numbness and Tingling is “No Big Deal”

One of the biggest about their numbness, tingling, and pain is that it goes away all by itself... without any treatment.

Let’s face it, if your neuropathy symptoms haven’t gone away by now, it’s not likely they will disappear on their own.

And it’s been shown in studies that if ignored, symptoms can intensify causing loss of sensation, unrelenting pain, and even disability; e.g., the need for canes, walkers or a wheelchair.

**Life’s too short to live like this!**

**Could this treatment -- called The NerveFit® be your solution for neuropathy?**

You see... I’ve made it my mission to help those suffering with neuropathy conditions. I’ve developed a drugless treatment program for neuropathy patients that is proving to be successful.

**For 5 Days Only**, I’m running a very special offer so you can find out if my NerveFit® will help you too. What does this offer include?

- And in-depth consultation about your health and well-being where I will listen...really listen... to the details of your case.
- A complete neuropathy evaluation of motor and sensory peripheral nerves (normally \$140.00).
- A thorough analysis of your evaluation findings so we can start mapping out your plan to being pain free, if we accept your case.

Again, the normal price for this type of evaluation is \$140, so you’re saving a considerable amount of money by taking me up on this offer, which is at no risk to you and FREE.

**Call 314-332-1086** before time runs out.

When you call, tell my office you’d like to come in for the FREE Neuropathy Evaluation so they can make sure you receive the proper credit for this special offer!

Remember, this special offer expires **10/15/19**, so call now before you forget!

**314-332-1086**

If you have serious concerns about falling, having a good quality of life or keeping your independence, I look forward to seeing if we can help you.

Sincerely,  
Dr. Ryan K. Lewis, DC
