PER CAPITA AND MEDIAN FAMILY MONEY INCOME IN 1959, FOR STATES, STANDARD METROPOLITAN STATISTICAL AREAS, AND COUNTIES

This report presents per capita and median family money incomes in 1959 for States, standard metropolitan statistical areas (SMSA's), and counties ranked in ascending order, from the lowest to the highest money income levels. The data are presented in four tables--table 1 shows data for the United States by State; table 2 shows data for standard metropolitan statistical areas; and tables 3 and 4 show data for counties.

The per capita money income figures contained in this report were derived from data published in: 1960 Census of Population, Volume I, Characteristics of the Population, chap-

ter C, Parts 2 through 52. Median family money incomes have been published in these census publications.

Of the 50 States and the District of Columbia, Mississippi ranked lowest in both per capita (\$967) and median family income (\$2,884). Nevada was the highest ranking State in per capita income (\$2,356), whereas Alaska ranked highest in median family income (\$7,305). The per capita income in the District of Columbia was higher than that of any State (\$2,404). Of the 212 standard metropolitan statistical areas, the Stamford, Conn., SMSA ranked highest in both per capita (\$3,785) and median family

Table A.--PER CAPITA INCOME RANGE IN 1959, FOR EACH DECILE OF COUNTIES
(Population as of 1960. Decile based on ascending order, from lowest to highest income)

County decile	Number of counties	Per capita income range		Population	
		From	To	Number	Percent
All counties ¹	3,132	\$424	\$3,541	179,323,125	100.0
Lowest decile.....	313	424	828	4,692,729	2.6
Second decile.....	313	828	975	5,616,615	3.1
Third decile.....	313	975	1,123	5,733,861	3.2
Fourth decile.....	313	1,123	1,243	6,455,851	3.6
Fifth decile.....	313	1,243	1,344	6,596,088	3.7
Sixth decile.....	313	1,344	1,445	7,719,033	4.3
Seventh decile.....	313	1,445	1,565	11,914,885	6.6
Eighth decile.....	313	1,565	1,707	15,050,448	8.4
Ninth decile.....	313	1,707	1,887	27,072,457	15.1
Highest decile.....	315	1,887	3,541	88,473,707	49.3

¹ Excludes two counties with a population of 50 persons for which per capita income was not available. This accounts for the difference in the total population in tables A and B.

U.S. DEPARTMENT OF COMMERCE, John T. Connor, *Secretary*
BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C. 20233, and U.S. Department of Commerce Field Offices, 75 cents.

money income (\$8,745). The Laredo, Tex., SMSA ranked lowest in both per capita (\$937) and median family income (\$2,952).

As shown in table A, there was considerable difference in the proportion of the population residing in counties with per capita incomes in the lowest decile (between \$424 and \$828), and the proportion residing in counties with per capita income in the highest decile (between \$1,887 and \$3,541). Counties in the lowest decile (tenth) group contained only about 3 percent of the total population, where-

as counties in the highest decile group contained 49 percent. It is interesting to note (table B) that the 10 counties with the lowest per capita incomes (between \$424 and \$505) contained only 0.05 percent of the U.S. population, whereas the 10 counties with the highest per capita incomes (between \$2,853 and \$3,541) contained 2.74 percent of the total population. These differences are the natural result of the fact that the lowest ranking counties are characteristically small rural counties, whereas the highest ranking are populous metropolitan counties.

DEFINITIONS AND EXPLANATIONS

Income in 1959.--Information on income for the calendar year 1959 was requested from all persons 14 years old and over in the sample. "Total income" is the sum of amounts reported separately for wage or salary income, self-employment income, and other income. Wage or salary income is defined as the total money earnings received for work performed as an employee. It represents the amount received before deductions for personal income taxes, Social Security, bond purchases, union dues, etc. Self-employment income is defined as net money income (gross receipts minus operating expenses) from a business, farm, or professional enterprise in which the person was engaged on his own account. Other income includes money income received from such sources as net rents, interest, dividends, Social Security benefits, pensions, veterans' payments, unemployment insurance, and public assistance or other governmental payments, and periodic receipts from insurance policies or annuities. Not included as income are money received from the sale of property (unless the recipient was engaged in the business of selling such property), the value of income "in kind," withdrawals of bank deposits, money borrowed, tax refunds, and gifts and lump-sum inheritances or insurance payments.

In the statistics on family income, the combined incomes of all members of each family are treated as a single amount. Although the time period covered by the income statistics is the calendar year 1959, the composition of families refers to the time of enumeration. For most of the families, however, the income reported was received by persons who were members of the family throughout 1959.

Median income.--The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, and the other having incomes below the median.

Per capita income.--This is the average amount of income available for every man, woman, and child in an area. Per capita income is derived by dividing the total income of an area by the population in the same area.

Limitations of the data.--The schedule entries for income are frequently based not on records but on memory, and this factor probably

produces underestimates, because the tendency is to forget minor or irregular sources of income. Other errors of reporting are due to misunderstanding of the income questions or to misrepresentation.

The income data in this report cover money income only. The fact that many farm families receive an important part of their income in the form of rent-free housing and of goods produced and consumed on the farm rather than in money should be taken into consideration in comparing the income of farm and nonfarm areas.

Comparability of census income data with Office of Business Economics State income series.--The Office of Business Economics of the Department of Commerce publishes data on aggregate and per capita personal income received by the population in each State. If the aggregate total income were estimated from the income statistics shown in this report, it would be lower than that shown in the State income series for several reasons. The income statistics published by the Bureau of the Census are obtained from households, whereas the State income series published by the Office of Business Economics is estimated largely on the basis of data derived from business and governmental sources. Moreover, the definitions of income are different. The Office of Business Economics income series includes some items not included in the income statistics shown in this report, such as income in kind, the value of the services of banks and other financial intermediaries rendered to persons without the assessment of specific charges, and the income of persons who died or emigrated prior to the time of enumeration. On the other hand, income statistics in publications of the Bureau of the Census include contributions for support received from persons not residing in the same household, and employee contributions for social insurance.

Source of data.--The statistics in this report were obtained from chapter C of 1960 Census of Population, Volume I, Characteristics of the Population, and are based on a 25-percent sample, consisting of one household out of every four (and one person out of every four not in households). More detailed definitions of the terms used in this report, explanations of collection and processing procedures, and a statement on the sampling variability may be found in the introduction to the Volume I report cited above.
