HARDEE HIGH SCHOOL

OVERALL SITE - MASTER PLAN

The new Hardee High School campus will be located directly west of the existing high school campus. The project consists of a new educational facility totaling approximately
200,000 gross square feet. The campus is organized into five primary buildings that provide academic, administrative, media, dining, performing arts, career and technical
education (CTE), and physical education functions.

Main Classroom Building
The Main Classroom Building is a two-story facility that serves as the academic core of the campus. The building houses general education classrooms, career and technical
education classrooms, science laboratories, art studios, collaborative learning environments, student support services, administrative offices, and the media center.

Career and Technical Education (CTE) Building
The CTE Building is a one-and-one-half-story facility containing specialized instructional laboratories for automotive technology, agriculture, welding, and woodworking
programs. Each laboratory is directly supported by adjacent classrooms that provide traditional instructional space to complement hands-on learning activities. The building
also includes a testing center where students may complete industry certification and professional credentialing examinations.

Gymnasium Building
The Gymnasium Building serves as a multi-purpose instructional and athletic facility. The building includes a full-size basketball court, health sciences laboratory, 911
emergency response training classroom, and dedicated instructional spaces for the Junior Reserve Officers' Training Corps (JROTC) program.

Performing Arts Building
The Performing Arts Building includes a theater with seating for approximately 500 occupants and is supported by a comprehensive suite of music education spaces, including
band and choral classrooms, instrument storage rooms, practice spaces, and associated support areas.

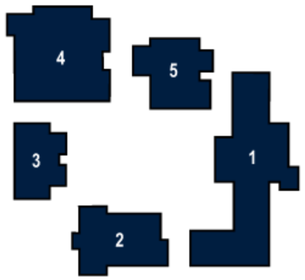

Multipurpose Dining Building
The Multipurpose Dining Building is a one-and-one-half-story facility that includes a full-service commercial kitchen, serving area, student dining space, and associated support
functions. The building also houses the Culinary Arts program, featuring dedicated teaching laboratories and classrooms that provide hands-on career and technical education.
These instructional spaces are integrated with the commercial kitchen, offering students real-world learning experiences within a professional food service environment.

PROGRAM SUMMARY

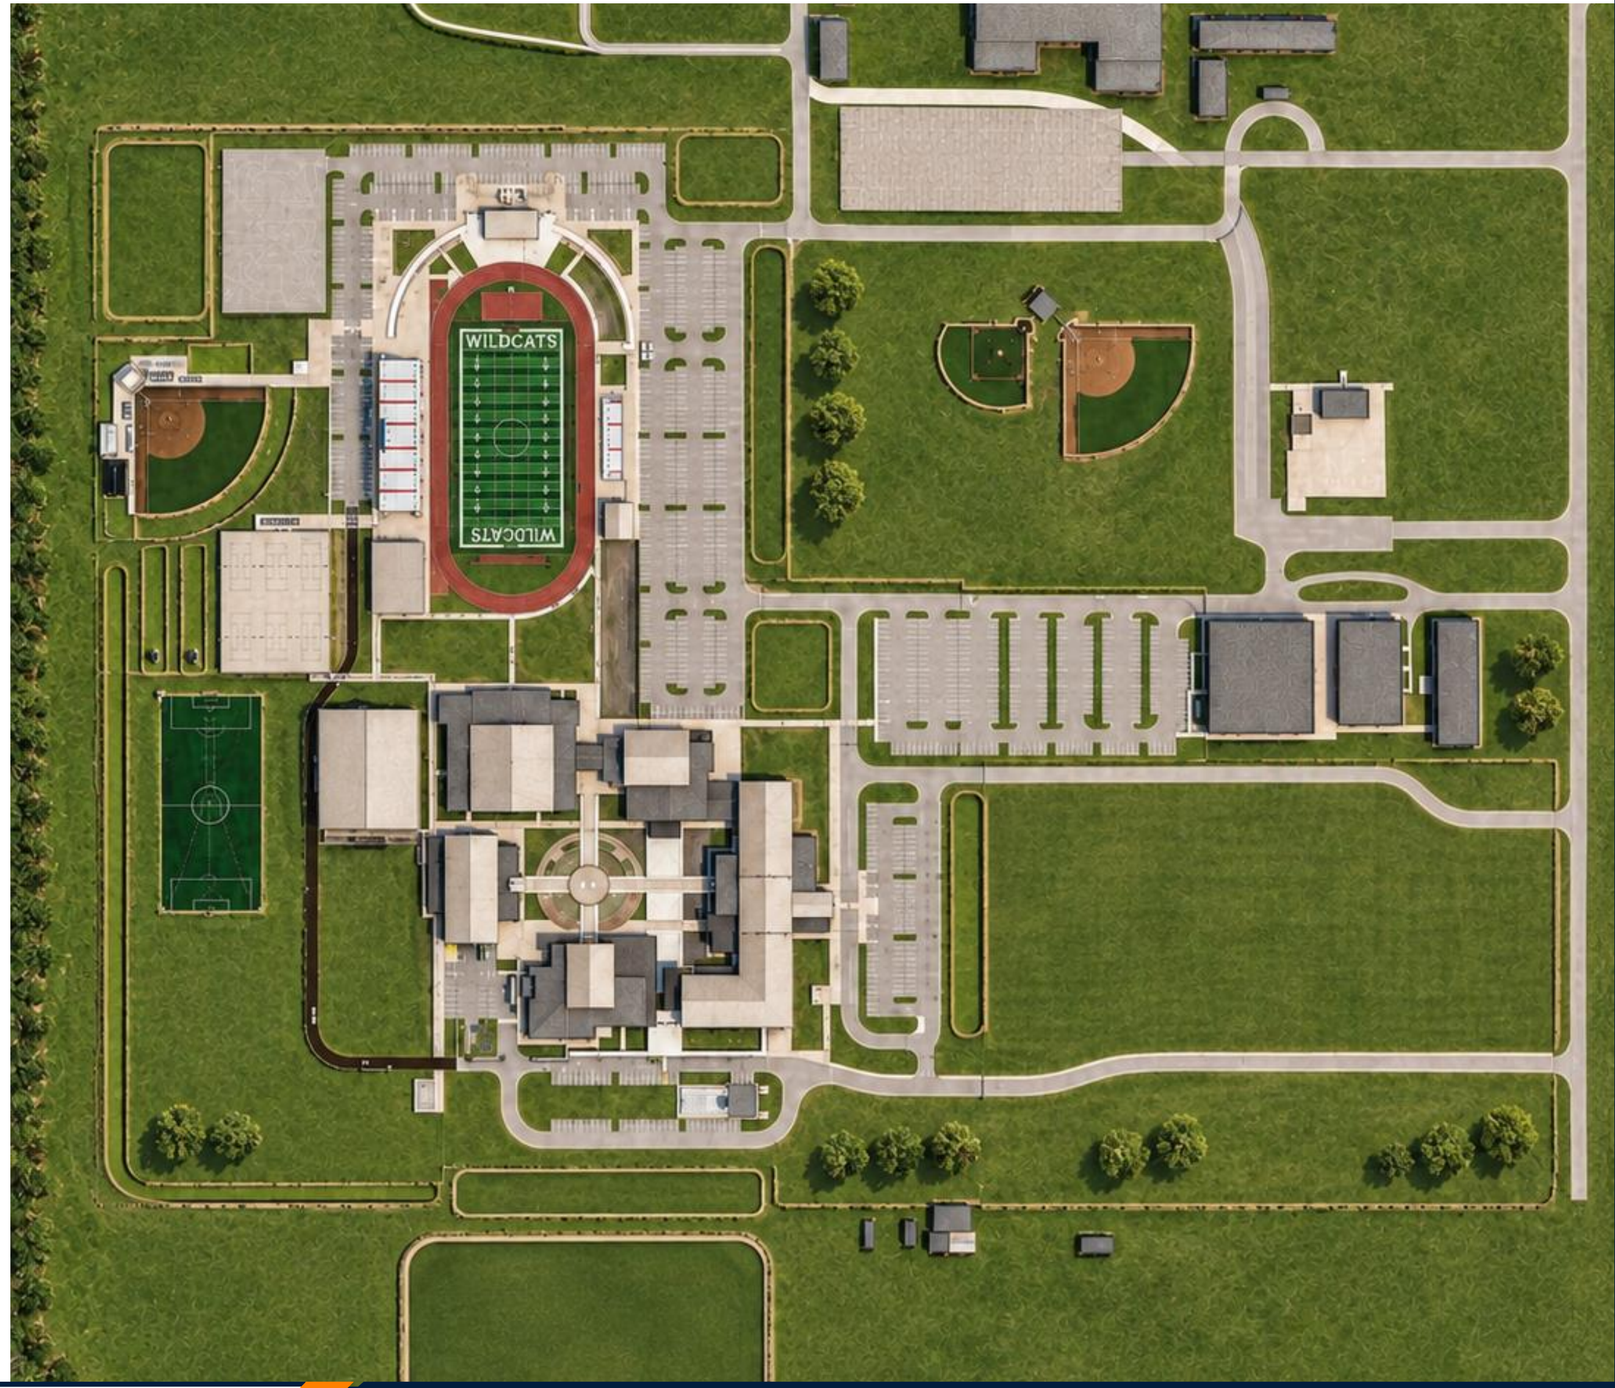

BUILDING 1 AREA	93,395 SF
BUILDING 2 AREA	24,036 SF
BUILDING 3 AREA	19,442 SF
BUILDING 4 AREA	43,059 SF
BUILDING 5 AREA	23,298 SF

STUDENT STATIONS	TOTAL SQUARE FOOTAGE
1,417	203,230 SF
