The latest issue of the Journal of Zoo and Wildlife Medicine highlighted a case study that details a fungal infection known as “cornulosis.” The condition primarily affects the skin of zoo animals, and the Journal of Zoo and Wildlife Medicine is the leading authority on veterinary medicine. The case study describes the successful treatment of a porcupine with the fungus. The porcupine was treated with a combination of antifungal medications and clinical care. The treatment was successful, and the porcupine is now recovering. The Journal of Zoo and Wildlife Medicine is a leading authority on veterinary medicine, and the treatment of fungal infections in zoo animals is an important area of research. The Journal of Zoo and Wildlife Medicine provides valuable information to veterinarians working with all types of zoo animals, and it is an essential resource for veterinary professionals in this field.
