

'We make owning a computer worry-free'

"We're one of the few companies in the St. Louis area that do on-site data recovery," explained Jeff Minnis, owner of **Jeff Computers**. "We can recover failing hard drives, flash drives and solid state drives, which means we can recover the documents and pictures on those devices. It's definitely a lifesaver for a lot of customers."

Jeff Minnis

Data can become corrupted when software glitches, hard drives fail, or malware invades. But with special equipment, Jeff Computers can bypass that damage and regain access to the critical data. Plus, the company offers maintenance and security plans that can help to prevent data loss from ever happening.

"Enhancing your security through proper maintenance, including trusted backup services, is even more vital in the age of e-commerce, email and online banking," Jeff said. "Our lives are on our computers. We make owning one a lot less stressful."

and actually back up the entire computer, including programs, to our encrypted cloud storage so that we can keep our customers' data and information safe," Jeff said, noting that all of this can be done remotely. "If the customer needs assistance or has an issue, all they have to do is pick up the phone and call us."

For customers in the market for a new machine, Jeff Computers sells both custom-built computers as well as refurbished ones, and Jeff said the current chip shortage has not affected his ability to fulfill orders.

"We're still able to meet all of our customers' needs," he said.
