

Gain confidence with a healthy, beautiful smile

Matthew Cline, D.D.S.

Helping people achieve healthy, beautiful smiles is the specialty of **Matthew P. Cline, DDS**, named one of St. Louis' top dentists since 2016.

"Our practice is unique in our ability to offer a full mouth solution for our patients, including those whose teeth are in poor condition. We can remove teeth and place implants or full replacements in one day in our Ellisville office," Dr. Cline explained. "Implants can be placed to support single crowns, multiple crowns (known as bridges) and even full arches of teeth.

"Implants also can make dentures more satisfactory. For years, denture wearers had no way to make them better or more tolerable, but now, we can place two or four implants that the dentures can snap on or screw into. This makes the dentures far more secure and gives the wearer greater confidence, including eating foods they may have previously avoided."

Digital technology and 3D printing makes the entire process very convenient for patients. It also has helped to perfect the natural look of implants and the elimination of silicone impressions.

"No more 'goopy stuff,'" Dr. Cline said. "Now, we use a specialized camera to create an accurate map of the patient's mouth so that the fit of implants or orthodontia is perfect."

Teeth straightening using the Invisalign clear aligner treatment is another way Dr. Cline helps to boost patients' confidence. One of the misconceptions about teeth alignment is that orthodontia is for youth and young adults. However, teeth often shift as we age due to jaw and tissue changes, and normal wear and tear. Invisalign's clear design allows adults to feel confident in their smile while they are improving.
