All information collected by WSDA becomes a public record that may be subjected to inspection and copying by members of the public, unless an exemption or other protection in the law exists. Results relate only to samples on this report. Unless noted on report, food/feed pathogen methods utilize 25 grams or 25 ml per sample; feed PM screening/microscopy methods utilize 0.5/2 grams per sample, respectively; environmental tests utilize 1 swab/sponge per sample.

Based on current FDA action levels, dietary concentrations of total aflatoxins should not exceed 20 ppb for immature animals or lactating dairy cattle (residue issues) , 100 ppb for breeding cattle and swine and mature poultry, 200 ppb for finishing swine, or 300 ppb for finishing cattle. Note: Samples analyzed as received.
